

Eminox Exhaust Options

To complement the original Eminox stack we have developed tailpipe conversions and exhaust conversions for Euro 4 and 5 trucks.

A range of tailpipe conversion options are available, these are tailor made to customer requirements for each vehicle. Tailpipe options include:

- Direct replacement for OE mild steel tailpipe
- Sidepipe configurations with multiple outlets
- Twin vertical and single tailpipes
- Iconic Eminox deflected tailpipe or silent raincaps
- Tailpipe diameters up to 6"

Twin tailpipe conversion on Iveco 480 Euro 5

The range of specialist exhaust conversions has been developed to incorporate the complex emissions technology which is now included on all new trucks. These conversions are designed to relocate or re-house the manufacturer's exhaust after-treatment system while retaining its emissions reduction capability. Each system is designed for optimum gas flow and noise reduction, and is individually calibrated to meet the manufacturer's guidelines.

Twin stack conversion on Scania R620 Euro 4

The original Eminox stack is available for pre-Euro 4 vehicles.

Our conversions are designed to provide additional ground clearance and free up valuable chassis space. This allows for customisations such as larger fuel tanks, crane installations or to accommodate a specialised body.

Single stack conversion on DAF 75.310 Euro 5

Single stack conversion on Scania R340 Euro 4

Side pipe conversion on Scania R580 Tractor Unit Euro 3

Conversion Kit

Vertical stack and tailpipe options are ideal for a wide range of vehicles for both aesthetic and operational purposes. They are an ideal solution where people work in close proximity to the vehicle because the exhaust gas is directed overhead.

Single tailpipe conversion on Volvo FMX Euro 5

Eminox specialises in the design and manufacture of exhaust systems for both original equipment manufacturers and retrofit applications. We have extensive knowledge of the latest emissions reduction technologies and are one of Europe's leading manufacturers of retrofit emission control technology.

Features & Benefits

- Silencer, pipework, clamps and heat shields made from grade 304 stainless steel to resist corrosion
- Internal silencer components also made from stainless steel
- Conversion technology maintains emission performance standards
- Single and twin stacks or horizontal configurations
- Range of solutions to meet your individual needs, from tailpipe conversions and relocations to full conversions
- Installation by specialist Eminox engineers is available
- All Eminox exhaust systems come with the reassurance of a comprehensive warranty
